Hello, I'm your assistant, how can I help you?

2. Which historical development in 1973 fundamentally changed how computers could be interconnected? a) The invention of UNIX operating system b) Development of DRAM by Intel c) Robert Metcalfe's development of Ethernet d) The creation of the floppy disk

The answer is (c) Robert Metcalfe's development of Ethernet.

Here's why:

- Ethernet is a networking technology that allows computers and other devices to communicate with each other over a shared cable.
- This was a groundbreaking development in 1973, as it paved the way for local area networks (LANs) and the interconnected world we have today.
