Hello, I'm your assistant, how can I help you?

1. During which period was UNIVAC 1107 developed, and what technological advancement characterized this era? a) 1937-1946, using vacuum tubes b) 1947-1962, using transistors c) 1963-1975, using integrated circuits d) 1975-present, using microprocessors

The correct answer is (c) 1963-1975, using integrated circuits.

Here's why:

• UNIVAC 1107 was developed and released in the early 1960s.

• Integrated circuits (ICs) revolutionized computing during this period. By combining multiple transistors and other electronic components onto a single semiconductor chip, ICs made computers smaller, faster, and more reliable.
