🤖 Hello, I'm your assistant, how can I help you?

🔴 2. Which historical development in 1973 fundamentally changed how computers could be interconnected? a) The invention of UNIX operating system b) Development of DRAM by Intel c) Robert Metcalfe's development of Ethernet d) The creation of the floppy disk

🤖 Hello!

As for your question, the correct answer is:

c) Robert Metcalfe's development of Ethernet

In 1973, Robert Metcalfe and David Boggs developed the first version of Ethernet, a local area network (LAN) technology that allowed computers to communicate with each other over short distances. This innovation fundamentally changed how computers could be interconnected, enabling the creation of networks and paving the way for modern communication systems.

Let me know if you have any further questions or if there's anything else I can help you with!
