🤖 Hello, I'm your assistant, how can I help you?

5. Which 1977 development represented a significant shift in making computers accessible to non-technical users? a) The Apple II launch b) The TRS-80's initial production c) The invention of VisiCalc d) The development of WordStar

🤖 According to the provided context, the correct answer is:

b) The TRS-80's initial production

It says: "1977: Radio Shack's initial production run of the TRS -80 was just 3,000. It sold like crazy. For the first time, non -geeks could write programs and make a computer do what they wished."

This development represented a significant shift in making computers accessible to non-technical users because it marked one of the first times that a personal computer was marketed and sold outside of technical circles.
